PROTECTING YOUR FINANCIAL INSTITUTION

Bank on Security

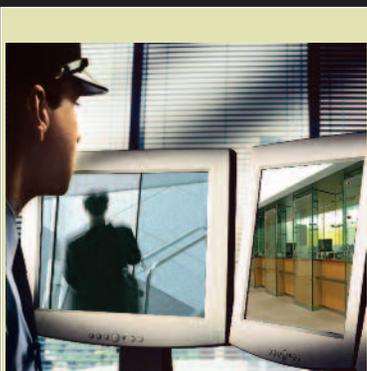

Honeywell

How to Stay Safe

Crime and fraud are the greatest business challenges facing financial institutions today. Ready to invest in your safety? We can help you create the most secure environment possible—providing you with the ability to protect your safes, private records, vaults and ATM's while controlling visitor traffic.

Honeywell understands your unique requirements, and can custom-tailor a solution to meet your exact needs and specifications. As the world's leading manufacturer of commercial security systems, we're equipped to meet the challenges that exist in bank branches of every size, and can provide you with the best technology available to help safeguard your cash, assets, customers and employees. Bank on it.

Sophisticated, Simple Solutions

Honeywell systems combine the most advanced technology with simple employee operation, providing solutions that help safeguard your financial institution against the threat of crime, fire and other hazards. There is no need to install multiple systems—you can have intrusion, fire, access control, hold-up and CCTV in one flexible, integrated system.

- Quickly respond to emergency situations with the proper notification devices
- CCTV and networked digital video systems provide remote viewing and integrate monitoring capabilities for use in observing branch exits, lobbies, teller lines, ATM's, vaults, server rooms and high security areas
- Control an individual's access to valuable assets and inventory based on job function, time or location
- Round-the-clock central station monitoring—24 hours a day, 7 days a week
- Monitoring via dialers, cellular radio, the Internet or Honeywell Total Connect™ Remote Services

Keypads

Honeywell's vibrant, full-color touchscreen keypads feature icons and menu-driven prompts that make operation simple for employees—reducing false alarms and training time. It even provides you with vital, operational details—letting you access opening and closing reports with a simple press on the touchscreen.

Access the Possibilities

Access control is a vital part of bank security. By monitoring and restricting entry, you do more than protect valuable assets and sensitive areas from theft and damage—you can actually manage your bank more safely and efficiently. Honeywell's VISTAKEY® helps ensure that the people with access to restricted areas like safes, vaults and registers are those entitled to it. You'll also increase employee safety, performance and accountability while reducing response time to alarms.

Simply placing an access card near the reader will quickly and easily grant access only to those specified. Cards, fobs or similar ID devices can also be used to disarm or arm the security system. There is no need to fumble with clumsy locks and keys or have employees remember multiple security codes. If a card is lost or stolen, it can be removed from the system without to the cost of having to redistribute keys or change locks.

Two-man Rule

Your site may require two people to be present whenever the vault is accessed or security protection is disarmed. If needed, you can enable a "two-man" option requiring that two separate user codes be entered before the area will disarm or allow door access.

Discrete Anti-Ambush Protection

In the event an employee—when arriving onsite—is ambushed by someone waiting inside, the system can discreetly notify the central station. When the "anti-ambush" feature is enabled, the employee must enter a special code upon entering the building and disarming the system. If the employee fails to enter a second code within a designated period of time, a silent ambush message is sent to the monitoring station.

Peace of Mind for Managers

Managers can place the system in "test" mode to check proper operation of the panic/hold-up buttons without having to call the central station.

Secure, Versatile Monitoring

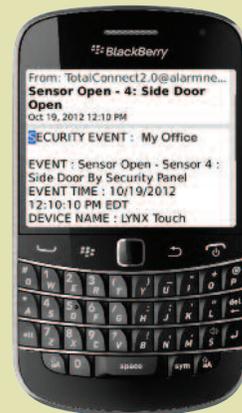

Honeywell knows it's critical that your alarm signals get through to the monitoring station whether you use a regular landline, cellular communicator or VoIP. Our versatile solutions also help eliminate worries about failures caused by floods, storms, vandalism, accidents, maintenance problems or telephone lines being cut by criminals. GSM cellular solutions provide the same monitoring features as standard phone lines or a network connection, such as remote programming over Honeywell's AlarmNet® radios. Both cellular and network solutions are encrypted to government standards and products are available with UL and ULC listings for high security monitoring.

Stay Connected

Ideal for the busy, mobile professional, Honeywell Total Connect™ Remote Services keep you in the know and arm you with the critical information you need instantly—providing you with direct access to the bank security system all day, every day.

- Control the bank's security system via a virtual keypad using any web browser on a PC or web-enabled mobile device
- Disarm specific areas like branch offices remotely (e.g., for cleaning crews who need to enter the premises off hours) while leaving vaults, depositories and ATMs armed locally. You can rearm the building after the work is complete from absolutely anywhere.
- If the bank alarm is being monitored at a central station and a hold-up button is activated while you are in your office, you can be notified immediately and take action just by looking at your mobile phone, BlackBerry®, iPhone®, iPad™, iPod touch®, Android™ or any other wireless handheld device when using the Remote Keypad application. Free apps available!*
- Be notified of various activities in the bank to help ensure safety or prevent unauthorized entry in restricted areas such as computer rooms, safes or other high-security locations
- View live video of activity occurring around the exterior or interior of the bank on up to six cameras at a time, record and store video clips or have pictures emailed to you upon an important event
